

the anti-decubitus  
mattress system  
with a difference

Imagine a mattress system with so many built-in features that you can literally create an endless array of subtle differences for the positioning of every patient or resident.

The TRI-FLEX™ mattress has been designed with three separate layers for complete flexibility of use in healthcare environments, combining high level of pressure care with unrivalled comfort.

Nursing staff and carers will be delighted by the way in which TRI-FLEX™ can be adapted so easily and in so many different ways. With TRI-FLEX™, they can provide that all important personal touch, by shaping the mattress surfaces for optimum individual comfort.

TRI-FLEX™ - patent pending

shaping  
for comfort

National distributors of Stiegmeyer profiling beds and over bed tables.  
Specialist range of medium high risk foam mattresses and accessories.

the anti-decubitus  
mattress system  
with a difference

The TRI-FLEX™ is so flexible in its design that individual patient solutions can be created from one single mattress.

# TRI-FLEX™ anti-decubitus

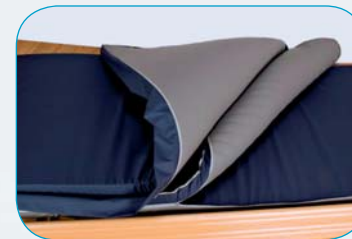

So many different positioning options means of course that there are so many more positive patient outcomes compared with other anti-decubitus mattresses. Minor adjustments can be made to suit everyone.

- TRI-FLEX™ is suitable for use in all healthcare environments, but is ideal for nursing homes and palliative care. With its multi layered combinations of different foams, the three sections have been designed with comfort in mind.
- Apart from excellent clinical outcomes, case studies on the TRI-FLEX™ have shown that vital extra factor – high levels of comfort. Without exception, all users commented on the pure comfort experience of TRI-FLEX™.
- We've even designed a TRI-FLEX™ gel cushion to provide continued high level comfort and care, for use in seating.

# TRI-FLEX™ flexibility

- The centre section can be unzipped and then rolled or folded in many different ways and positioned to provide the perfect angle for support.
- TRI-FLEX™ wedges can be used at the ends or sides of the mattress.
- By unzipping the three layers, the wedges can be inserted at different levels in the mattress to create increased or decreased angles, for finer changes in positioning according to individual needs.
- You will be amazed at how many ways you will find to use the TRI-FLEX™. Even without changing its shape, the three separate layers combine to form a highly effective and extremely comfortable pressure reducing mattress

- Fold or roll the middle section to create the perfect angle for raising the heel or lower leg to minimise interface pressures.

# TRI-FLEX™ comfort

Getting a good night's sleep is vital to our health and general wellbeing. The contribution that TRI-FLEX™ can make here is tremendous.

- By rolling the middle section from a corner, a separate option for raising one leg or heel only can be created.

- TRI-FLEX™ wedges can produce the right tilt in the right place along either side of the mattress, either inserted beneath or in between the mattress layers

- Combining TRI-FLEX™ wedges can produce an elongated raised section and rolling back the middle layer in full creates another option for treating people in the prone position.
