Poly-cotton bedding

- Knitted semi-fitted top sheet
- Knitted elasticated bottom sheet
- Knitted pillow case

TRI-FLEX™ “Tried and tested” - Details of independent case studies and interface pressure test results are available
How many new ways can you find to use the TRI-FLEX™?

at a glance

| **TRI-FLEX™** is a most versatile mattress for use in all healthcare environments. Cost effective and easy to use, it is particularly suitable for palliative care and nursing homes. The ingenious design allows for complete freedom in positioning.

With TRI-FLEX™, there is no need to change to a different mattress to achieve an alternative clinical outcome or fulfill a special requirement. Simple adaptations will transform its shape to suit the positioning needs of the individual.

Interface pressures can be minimised in those areas requiring protection, by adjusting the shape of the mattress surfaces to take into consideration, height, weight and additional health factors. E.g. Oedema, pressure sores or other ulcerations.

Contact us to find out more details or to tell us new ways you have found to use the TRI-FLEX™.

National distributors of Stiegemeyer profiling beds and over bed tables.
Specialist range of medium to high risk foam mattresses and accessories.
